

## *The SILVERSAVER 200<sup>®</sup>*

### Utensil Retrieval System

Congratulations on your purchase of the SilverSaver 200 from FlatwareSaver, LLC! You are now well on your way to drastically reducing the inadvertent disposal of flatware, ramekins, and other items of value. Your SilverSaver 200 allows employees to easily, quickly, and cleanly retrieve these items BEFORE they enter the trash receptacle. This device requires no training, is easy to clean, and will provide years of carefree use.

### SETTING UP THE SILVERSAVER 200

1. Place the SilverSaver body on top of a 32 or 44 gallon round trash container.
2. Place the tray in the SilverSaver's body, setting the 2 axles into the grooves in the sides of the Saver. The handle should fit into the slot in the side of the body and engage the latch.

### USING YOUR SILVERSAVER 200

Dump all table scraps onto the tray. If any valuables are among the trash and food scraps, they can easily be removed and set aside. Then rotate the tray by lifting the handle. The waste will drop into the trash receptacle. Return the tray to the original position, ready for the next load of scraps.

### TIPS FOR MINIMIZING SILVERWARE LOSSES

Although waste can be piled several inches high on the SilverSaver tray, it is recommended that the tray be rotated after every load. This will prevent a large amount of waste from building up on the tray, thus making it easier to identify and remove valuable items.

### CARE AND MAINTENANCE

Your SilverSaver 200 is maintenance free; simply clean it once a day to prevent the buildup of food residue. The tray may be washed in the dish machine or sprayed off in the sink.

Take the SilverSaver 200 tray and body to the washing area. These can be put through the dishwashing machine, sprayed down with hot water, or gently wiped with a sponge using soap and water. **Do not use an abrasive scrubber, as this may scratch the surfaces.**
